

LIAISE Field Workshop
Monday 26th of July, 18:00 – 19:45

This seminar should encourage some scientific exchanges between all participants in the LIAISE field campaign.

Presentations should provide an overview of early results of the field campaign and provide background information for those not familiar with the processes. The speakers are asked to get in touch with the various teams in the field to select the results to be presented.

As the seminar will be on-line, short presentations of 10 minutes are favoured to allow time for discussion.

18:00 – 18:10 : Discusion of a common campaign calendar (Jan & Aaron)

Surface functioning and surface fluxes at site level

- **18:10-18:25** : Ecophysiological observations and plant functioning (Wageningen)
- **18:25-18:40** : Evaporation observations over La Cendrosa & Lake Ivars (Oscar Hartogensis)
- **18:40-18:55** : Overview of the solar-induced fluorescence observations (Bastian Siegmann)

Atmospheric boundary layer processes

- **19:00-19:15** : The diurnal cycle of the atmospheric profiles at La Cendrosa and Els Plans (Guylaine Canut & Jennifer Brook)
- **19:15-19:30** : Atmospheric turbulence over the irrigated and natural areas in the region (Marie Lothon & Fabienne Lohou)
- **19:30-19:45** : Night-time boundary layers over the region (Joan Cuxart)
